Configuring MASON-SECURE on Apple Mobile Devices

Thanks to Matt Szaro and Brian Mancuso for this documentation. To autoconfigure your device, follow these instructions.

STEP 1:
On the home screen of the device, find the Settings app and tap it.

STEP 2:
Tap on the Wi-Fi option in the list displayed within the Settings app to open the Wi-Fi Networks manager.
STEP 3:
Tap on the wireless network titled “MASON-SECURE.” If this option is not listed, proceed to Step 4, otherwise proceed to Step 5.

STEP 4:
Tap the option for “Other” under the list of networks. Type “MASON-SECURE” as the name and select “WPA2 Enterprise” as the security. Below, where it says username and password, have the user input their PatriotPass credentials before tapping “Join” at the top. Then skip to Step 6.
STEP 5: Have the user enter their PatriotPass login credentials and tap “Join” in the top right hand corner.

STEP 6: The screen will prompt the user with one of two certificates (both are shown above). Both are valid and from the AddTrust External CA Root, accept the certificate and you will be connected to MASON-SECURE.
