IOS INSTRUCTIONS
CONNECTING TO “EDUROAM” WIRELESS NETWORK

STEP 1: Navigate to your Wi-Fi connection icon. If you are connected to any wireless connection, disconnect that first. Select “eduroam” wireless connection.

STEP 2: Selecting “eduroam” wireless should bring up a window similar to the one shown on the left. Type in your NetId@mesa.gmu.edu and your Patriot Pass strong password. Select “Join”.

STEP 3: A window pops up complaining about the certificate being “Not Verified”. Please select “Accept”. The trust certificate gets added automatically when you connect.

STEP 4: You have now completed the one-time set up of the “eduroam” network connection on your laptop. In the future, when you are at a non-GMU location which has the “eduroam” wireless, you can then access it with your Mason credentials from Step 2 above. See https://www.eduroam.org/ for locations where eduroam is available.
